Vara BBS Client

An application for using the VARA software modem to access a G8BPQ BBS. The application uses the modem's CONTROL and DATA ports, typically network ports 8300 and 8301. This application does not use the modem's KISS port. The VARA software modem can located on the local computer or on another networked computer.

Features:

Two large windows: left shows message list, right shows the selected message.

A command and data monitoring window for debugging that can be hidden or resized. [View]

A status bar showing modem activity, signal level, and bitrate.

A button panel provides access to common tasks, while command line input allows you to execute any BBS command.

A built in Address book [Settings]

A BBS command reference [Help]

Right click on a message line to open a Reply
